Subject Index

A

Acetate(s): Labeled, biosynthesis *in vitro* from, and testosterone-4-C^{14}, estradiol-17β, follicle-stimulating hormone, effect, *Hollander and Hollander*, 1097
Metabolism, insulin, effects, and glucose, pyruvate: rat adipose tissue, *in vitro*, studies, *Winegrad and Renold*, 267

Acetobacter suboxydans: Glucose and gluconate dissimilation, *Kitos, Wang, Mohler, King, and Cheldelin*, 1295

Acetobacter xylinum: Phosphorolytic cleavage, fructose-6-phosphate, by fructose-6-phosphate phosphoketolase, *Schramm, Klybas, and Racker*, 1283

Acetolactate: Formation; isoleucine, valine, metabolism, *Escherichia coli, Umbarger and Brown*, 1156

Acetylcholine: Exchange, inositol, phosphate, in brain phosphoinositide, *Hokin and Hokin*, 818
—, phosphate, phosphatidic acid, brain microsomes, *Hokin and Hokin*, 822

Acetylene: Compounds, enzymatic utilization; acetylenedicarboxylic acid, conversion, pyruvate, *Yamada and Jakoby*, 706

Acetylenedicarboxylic acid: Conversion, pyruvate; acetylenic compounds, utilization, *Yamada and Jakoby*, 706

Acetylglucosamine: *N*-, carbohydrate metabolism, rat liver, and glucosamine, *Spiro*, 546

ACTH: *See* Adrenocorticotropin hormone

Acyl: Fatty derivatives, dehydrogenation mechanism, coenzyme A: butyryl dehydrogenase, green color, *Steyn-Parvé and Beinert*, 843
—, —, —; stable enzyme-substrate complexes, *Steyn-Parvé and Beinert*, 843

Acylase: I, hog kidney; dialkylfluorophosphatase, comparison, *Bell and Mounter*, 900
—, —; substrate specificity, *Mounter, Dien, and Bell*, 903

Adenine: 1-*N*-oxide derivatives, biological activities; purine *N*-oxides, *Brown, Clarke, Biesele, Kaplan, and Stevens*, 1509
—, xanthine oxidase, action; purine *N*-oxides, *Brown, Stevens, and Smith*, 1513

Adenosine: Carbon skeleton, purine nucleosides, ribonucleic acid and deoxyribonucleic acid, *Neurospora, McNutt*, 193

Adenosine diphosphate: Exchange reaction, and adenosine triphosphate, oxidative phosphorylation, *Wadkins and Lehninger*, 1589

Adenosine-5′-phosphosulfate: Synthesis, enzymatic, *Robbins and Lipmann*, 686

Adenosine triphosphate: Activating effect, brain, adenylic deaminase, *Mendicino and Muntz*, 178
Exchange reaction, and adenosine diphosphate, oxidative phosphorylation, *Wadkins and Lehninger*, 1589
Formation, amino acyl adenylates, enzymatic utilization, *Berg*, 601

Adenosyl-L-methionine: *S*-, choline, creatine, cysteine, synthesis, *in vivo, in vitro, Stekol, Anderson, and Weiss*, 425
—, enzymatic decomposition, *Shapiro and Mather*, 631

Adenylic deaminase: Brain, adenosine triphosphate, activating effect, *Mendicino and Muntz*, 178

Adrenal(s): Glands, rat, exogenous requirements, adrenocorticotropic hormone, action *in vitro*, *Péron and Koritz*, 256
Human fetal, biosynthesis by, Δ^4-androstenedione, 17α-hydroxyprogesterone, from progesterone, *Solomon, Lenman, Lind, and Lieberman*, 1084

Adrenaline: Secretion, adrenal medulla, and phospholipides, *Hokin, Benfey and Hokin*, 814

Adrenocorticotropic hormone(s): Activation, adrenal phosphorylase, *Haynes*, 122
Exogenous requirements, action *in vitro*, rat adrenal glands, *Péron and Koritz*, 256

Adrenocorticotropin: Secretion, and corticosteroids, phospholipides, *Hokin, Hokin, Saffran, Schally, and Zimmerman*, 811

Albumin: Acid-, complex, fatty; uptake, lipoproteins, ascites tumor cells, *Fillerup, Migliore, and Mead*, 98
Serum, requirement, oxidative phosphorylation, flight muscle mitochondria, *Sacktor, O'Neill, and Cochran*, 1233
—, specific binding, L-tryptophan, *McMenamy and Oncley*, 1436

Aldolase: Liver, bovine; isolation, crystallization, general properties, *Peanasky and Lardy*, 365
—; measurements, physical, chemical, *Peanasky and Lardy*, 371

Aldonolactase: Animal tissues, and uronolactases, *Winkelman and Lehninger*, 794

Alloxan: Tryptophan peroxidase, induction, and insulin, *Schor and Frieden*, 612

Amidotransferase: 5-Phosphoribosylpyrophosphate; purine biosynthesis, *Hartman and Buchanan*, 451

Amino acid(s): Activation, plant tissues, *Clark*, 421
—, relation, vitamin B_{12}; and protein biosynthesis, *Wagle, Mehta, and Johnson*, 619
Aromatic, transamination, enol boratetautomerase method, and keto acid oxidation, *Lin, Pitt, Civen, and Knox*, 668
C-terminal, sequence, growth hormones, human, monkey, whale, and sheep, pituitary glands, *Li, Parcells, and Papkoff*, 1143
Content; epiphyseal palate, long bone, chemical composition, *Castellani and Castellani-Bisi*, 920
Exchange diffusion, transport, intracellular level, in Ehrlich carcinoma cells, *Heinz and Walsh*, 1488
Imbalance, nitrogen retention, adult rats, *Kumta, Harper, and Elvehjem*, 1505
Irish moss, *Chondrus crispus*, and peptides, proteins, *Young and Smith*, 406
Labeled, incorporation, protein, muscle and liver mitochondria, *McLean Cohn, Brandt, and Simpson*, 657
Mammalian transport, carboxyl oxygen, nonexchange, *Christensen, Parker, and Riggs*, 1485
N-terminal, analysis, growth hormones, human, monkey, whale, and

Amino acid(s)—*continued:*
beef, pituitary glands, *Parcells and Li,* 1140
Sequence, diisopropylphosphoryl binding, diisopropylphosphoryltrypsin, *Dixon, Kauffman, and Neurath,* 1373
Spectra, resonance, proton magnetic, *Jardetzky and Jardetzky,* 383
Synthesis, reversal, oxidase reaction, *Radhakrishnan and Meister,* 444
System, incorporating, microsomes, rat liver, *Sachs,* 643
—, —, —, pyrophosphate, *Sachs,* 650
Transport, potassium migration, *Riggs, Walker, and Christensen,* 1479
Ultraviolet, difference spectra, tyrosine groups, and proteins, *Wetlaufer, Edsall, and Hollingworth,* 1421
Amino acyl adenylate(s): Synthesis, chemical, *Berg,* 608
Utilization, enzymatic, adenosine triphosphate, formation, *Berg,* 601
Aminobutyric acid: γ-, α-ketoglutaric acid, transaminase, beef brain, *Baxter and Roberts,* 1135
Amino groups: End, and physical constants, abnormal human serum globulins, *Putnam,* 1448
Aminoisobutyric acid: C^{14}-α-, diminished uptake, vitamin B_6-deficient rat tissue, *Riggs and Walker,* 132
Aminolevulinic acid: δ-, enzymatic synthesis, *Kikuchi, Kumar, Talmage, and Shemin,* 1214
Aminonicotinamide: 6-, niacin antagonist, mechanism of action; pyridine nucleotide metabolism, *Dietrich, Friedland, and Kaplan,* 964
Amino-N-ribosylacetamide-5′-phosphate kinosynthase: Purine biosynthesis, *Hartman and Buchanan,* 456
Androstenedione: Δ^4-, and 17α-hydroxyprogesterone, biosynthesis, progesterone, human fetal adrenals, *Solomon, Lanman, Lind, and Lieberman,* 1084
Arginine: Benzoyl-L-, ethyl ester, hydrolysis; kinetics, papain action, *Smith and Parker,* 1387
Culture, tissue, requirement; related compounds, relationship, *Morgan, Morton, and Pasieka,* 664
Arginine-vasotocin: Synthetic analogue, posterior pituitary hormones, oxytocin ring, vasopressin side chain, *Katsoyannis and du Vigneaud,* 1352
Argininosuccinic acid: Reversible formation; urea biosynthesis, *Petrack and Ratner,* 1494
Artery: Pudic, unilateral injection, glycerol-1,3-C^{14}, milk constituents; lactose synthesis, *Wood, Joffe, Gillespie, Hansen, and Hardenbrook,* 1264
Ascites: Ehrlich tumor cells *in vitro,* glucose, nucleosides, effect, purine synthesis, *Harrington,* 1190
Tumor, uptake, lipoproteins, fatty acid-albumin complex, *Fillerup, Migliore, and Mead,* 98
Ascorbic acid: Synthesis, liver extracts, animals deprived of tocopherol, Mn^{++} and Co^{++} requirements, *Caputto, McCay, and Carpenter,* 1025
Aspartase: Reaction, stereospecificity, *Krasna,* 1010
Aureomycin: Resistance, enzymatic basis; electron transport inhibition, *Escherichia coli, Saz and Martinez,* 1020
Azotobacter: Reduced diphosphopyridine nucleotide oxidase, purification, properties, *Repaske and Josten,* 466

B

Bacillus subtilis: Culture filtrates, D- and L-glutamyl polypeptides, isolation, *Thorne and Leonard,* 1109
Betaine: Synthesis, *Beta vulgaris,* and choline, *Delwiche and Bregoff,* 430
Beta vulgaris: Betaine, choline, synthesis, *Delwiche and Bregoff,* 430
Bile acid(s): Isomeric 3α, 6,7-trihydroxycholanic acids, structures, *Hsia, Elliott, Matschiner, Doisy, Thayer, and Doisy,* 1337
Transformation, enterohepatic circulation, cholic acid, and steroids 68, *Arne and Sjövall,* 872
Biotin: Carboxylation, β-hydroxyisovaleryl coenzyme A; carbon dioxide, enzymatic activation, *Woessner, Bachhawat, and Coon,* 520
Lactobacillus arabinosus, permeability, *Lichstein and Ferguson,* 243
Yeast glycolysis, *Strauss and Moat,* 765
Blood: Glucagon-like material in, man and dog, *Makman, Makman, and Sutherland,* 894
Bone: Long, epiphyseal plate, chemical composition; content of amino acids, *Castellani and Castellani-Bisi,* 920
Bone salt: Solubility, fluoride, *Kutnerian and Kuyper,* 760
Bryophyllum calycinum: Leaves, potassium dihydrogen L-(+)-isocitrate, preparation, *Vickery and Wilson,* 14
Butyryl: Dehydrogenase, green color: fatty acyl derivatives, dehydrogenation mechanism, coenzyme A, *Steyn-Parvé and Beinert,* 843

C

C^{14}: *See* Carbon, labeled
Calcium: Metabolism, studies, *Clark and Geoffrey,* 203 203
Canavanine: Enzymatic cleavage, homoserine, hydroxyguanidine, *Kalyankar, Miyoshi, and Snell,* 1175
Carbamyl: Phosphate synthetase, mechanism, action, *Metzenberg, Marshall, and Cohen,* 1560
—, purification, frog liver, *Marshall, Metzenberg, and Cohen,* 102
Carbohydrate(s): Metabolism, rat liver; alterations, dietary variation, *Landau, Hastings, and Zottu,* 1257
Utilization, human cell cultures, *Eagle, Barban, Levy, and Schulze,* 551
Carbon: 2, Imidazole, utilization, histidine, purines, bacteria, biosynthesis, *Revel and Magasanik,* 439
Labeled, distribution, hexose phosphates, recycling, pentose cycle, effect, *Woou and Katz,* 1279
Carbon dioxide: Enzymatic activation; biotin carboxylation, β-hydroxyisovaleryl coenzyme A, *Woessner, Bachhawat, and Coon,* 520
Carboxyl oxygen: Nonexchange, mammalian amino acid transport, *Christensen, Parker and Riggs,* 1485
Catabolism: Glucose, fetal, adult, heart, *Jolley, Cheldelin, and Newburgh,* 1289
Catechol(s): Amines, *O*-methylation, *in vivo, Axelrod, Senoh, and Witkop,* 697
O-methylation, enzymatic, and epinephrine, *Axelrod and Tomchick,* 702
Cell(s): Ascites, tumor, uptake, lipoproteins, fatty acid-albumin complex, *Fillerup, Migliore, and Mead,* 98

Cell(s)—*continued:*
Culture, mammalian, enzyme activity, *Lieberman and Ove*, 634
—, protein growth factor, *Lieberman and Ove*, 637
Ehrlich ascites tumor, *in vitro*, glucose, nucleosides, effect, purine synthesis, *Harrington*, 1190
—, carcinoma, amino acids, exchange diffusion, transport, intracellular level, *Heinz and Walsh*, 1488
Fractions, pig heart, phosphatides, *Marinetti, Erbland, and Stotz*, 562
-free extracts, and chromatophores, *Rhodospirillum rubrum*, photoreduction, pyridine nucleotides, *Vernon*, 212
— systems, deiodination, diiodotyrosine, *Stanbury and Morris*, 106
Human, cultures, carbohydrates, utilization, *Eagle, Barban, Levy, and Schulze*, 551
Mast, isolated, fractions, inhibition, hyaluronidase, microdetermination, *Glick, Ottoson, and Edmondson*, 1241
Normal, T2r-infected, *Escherichia coli*, strain B, acid-soluble fraction, analysis, *O'Donnell, Mackal, and Evans*, 1523
T2r-infected, normal, *Escherichia coli*, strain B, acid-soluble fraction, analysis, *O'Donnell, Mackal, and Evans*, 1523
Cerebroside: Gaucher's disease, reinvestigation, *Rosenberg and Chargaff*, 1323
Cholestenone: Biochemical transformation of, cholesterol, *Rosenfeld and Hellman*, 1089
Cholesterol: Absorption, and fat, lymph and serum lipopreteins, composition and concentration, *Hillyard, Chaikoff, Entenman, and Reinhardt*, 838
—, mechanism; changes, free and esterified pools, mucosa, feeding, -4-C^{14}, *Swell, Trout, Hopper, Field, and Treadwell*, 49
Biochemical transformation to, cholestenone, *Rosenfeld and Hellman*, 1089
Biosynthesis, squalene, turnover, relation, *Loud and Bucher*, 37
4,4-Dimethyl-, isomeric, synthesis, lanosterol metabolite, identification, *Gautschi and Bloch*, 1343
Fats, absorption, chyluria, *Blomstrand and Ahrens*, 327
Cholesterol—*continued:*
Metabolism, scorbutic guinea pigs, *Banerjee and Singh*, 336
Cholic acid: Transformation, enterohepatic circulation, bile acids, steroids 68, *Arne and Sjövall*, 872
Choline: Deoxycytidine diphosphate, and deoxycytidine diphosphate ethanolamine, Novikoff hepatoma; phosphorus compounds, animal tissues, *Schneider and Rotherham*, 948
S-adenosyl-L-methionine, synthesis, *in vivo, in vitro*, and creatine, cysteine, *Stekol, Anderson, and Weiss*, 425
Synthesis, *Beta vulgaris*, and betaine, *Delwiche and Bergoff*, 430
Chondroitinsulfuric acid: B, β-heparin, chemistry, *Cifonelli, Ludowieg, and Dorfman*, 541
Chromatography: Cellulose ion exchange agents; mammalian tyrosinase, studies, *Brown and Ward*, 77
Silicic acid, complex lipide mixtures, separation, *Hirsch and Ahrens*, 311
Chromatophores: *Rhodospirillum rubrum*, inhibition, reduced diphosphopyridine nucleotide oxidase, activity, illumination, *White and Vernon*, 217
—, photoreduction, pyridine nucleotides, and cell-free extracts, *Vernon*, 212
Chyluria: Fat, absorption; palmitic and oleic acids, *Blomstrand and Ahrens*, 321
Chymotrypsin: Inactivation, reversibility, *Aldrich and Balls*, 1355
Chymotrypsinogen: α-, disulfide bonds, cleavage, and trypsinogen, *Pechère, Dixon, Maybury, and Neurath*, 1364
Citric acid: Cycle, enzymes, avian embryo, *Mahler, Wittenberger, and Brand*, 770
Citrinin: Biogenesis, *Schwenk, Alexander, Gold, and Stevens*, 1211
Citrovorum factor: Folic acid conversion, studies *in vivo, Doctor*, 982
Co^{++}: Requirements, and Mn^{++}, ascorbic acid synthesis, liver extracts, animals deprived of tocopherol, *Caputto, McCay, and Carpenter*, 1025
Coenzyme: A, acetyl, condensing enzyme, D_2O, *Marcus and Vennesland*, 727
—, fatty acyl derivatives, dehydrogenation mechanism: butyryl dehydrogenase, green color, *Steyn-Parvé and Beinert*, 853
—, —, dehydrogenation mechanism: stable enzyme-substrate complexes, *Steyn-Parvé and Beinert*, 843
—, β-hydroxyisovaleryl, biotin, carboxylation; carbon dioxide, enzymatic activation, *Woessner, Bachhawat, and Coon*, 520
—, β-hydroxy-β-methylglutaryl, deacylase, *Dekker, Schlesinger, and Coon*, 434
—, palmityl, fatty acid, synthesis, pigeon liver system, *Porter and Long*, 20
—, phosphorylation, oxidative, *McMurray and Lardy*, 754
Complexes, glyceraldehyde-3-phosphate, lactic dehydrogenase, fluorescence spectra, polarization, *Velick*, 1455
Collagen: Heat precipitation, neutral salt solutions, rate-regulating factors, *Gross and Kirk*, 355
Compound: 260, structure; bacterial oxidation, vitamin B_6, *Ikawa, Rodwell, and Snell*, 1555
Corticosteroid: Secretion, and adrenocorticotropin, phospholipides, *Hokin, Hokin, Saffran, Schally, and Zimmerman*, 811
Creatine: *S*-adenosyl-L-methionine, synthesis, *in vivo, in vitro*, and choline, cysteine, *Stekol, Anderson, and Weiss*, 425
Creatinine: Test, specific, *Sullivan and Irreverre*, 530
Cysteine: Content, human hemoglobin, *Cole, Stein, and Moore*, 1359
S-adenosyl-L-methionine, synthesis, *in vivo, in vitro*, and choline, creatine, *Stekol, Anderson, and Weiss*, 425
Cystine: Desulfurase, activity, mouse tumors, *Stekol, Weiss, and Anderson*, 936
Cytidine: Incorporation, carbon skeleton, pyrimidine nucleosides, ribonucleic acid, deoxyribonucleic acid, *Neurospora, McNutt*, 189
Cytochrome(s): 556, purification, pig liver; electron transport, enzymes, studies, *Raw, Molinari, do Amaral, and Mahler*, 225
b, kinetics, inhibition, succinic oxidase system, *Chance*, 1223
—, purification, characterization, *Bernstein and Wainio*, 361
c, mammalian, reductase, cofactor,

Cytochrome(s)—*continued:*
tocopherol; lipides, electron transport, *Donaldson, Nason, and Garrett,* 572
c, reductase lipide cofactor; lipides, electron transport, *Donaldson, Nason, Lehman, and Nickon,* 566
Reductase: microsomal, interaction, nucleotides, *Strittmatter,* 748

D

Deacylase: β-Hydroxy-β-methylglutaryl coenzyme A, *Dekker, Schlesinger, and Coon,* 434
Dehydrogenase: Butyryl, green color: fatty acyl derivatives, dehydrogenation mechanism, coenzyme A, *Steyn-Parvé and Beinert,* 843
Dihydroorotic, purification, properties, *Friedmann and Vennesland,* 1398
L-Glutamic acid; enzyme sulfhydryl groups, *Hellerman, Schellenberg, and Reiss,* 1468
Glutamic, beef liver, zinc, *Adelstein and Vallee,* 589
Glyceraldehyde-3-phosphate, hydrolytic activity, *Park and Koshland,* 986
Lactic, coenzyme complexes, fluorescence spectra, polarization, and glyceraldehyde-3-phosphate, *Velick,* 1455
Ribitol; enzyme purification and properties, *Fromm,* 1049
Dehydrogenation: Mechanism, fatty acyl derivatives, coenzyme A: butyryl dehydrogenase, green color, *Steyn-Parvé and Beinert,* 853
Mechanism, fatty acyl derivatives, coenzyme A: stable enzyme-substrate complexes, *Steyn-Parvé and Beinert,* 843
Dehydroshikimic acid: 5-, enzymatic conversion, protocatechuic acid, *Gross,* 1146
Deiodination: Diidotyrosine, cell-free systems, *Stanbury and Morris,* 106
Deoxycytidine diphosphoethanolamine: Acid-soluble extract, calf thymus, and ribose analogue, *Potter and Buettner-Janusch,* 462
Deoxycytidylic acid: Enzymatic phosphorylation, *Maley and Ochoa,* 1538
Deoxy-6-fluoroglucose: 6-, utilization, kidney tissues, *Serif and Wick,* 559
Deoxyguanosine: Enzymatic cleavage, deoxyguanosine triphosphate, and
Deoxyguanosine—*continued:*
tripolyphosphate, *Kornberg, Lehman, Bessman, Simms, and Kornberg,* 159
Deoxyguanosine triphosphate: Enzymatic cleavage, deoxyguanosine and tripolyphosphate, *Kornberg, Lehman, Bessman, Simms, and Kornberg,* 159
Deoxyribonuclease: Specificity; trinucleotide hydrolysis, *Potter, Laurila, and Laskowski,* 915
Deoxyribonucleate: Denatured, recognition, estimation, *Shack,* 677
Deoxyribonucleic acid: Carbon skeleton, adenosine, incorporation, purine nucleosides, and ribonucleic acid, *Neurospora, McNutt,* 193
—, cytidine, incorporation, pyrimidine nucleosides, and ribonucleic acid, *Neurospora, McNutt,* 189
Enzymatic synthesis, *Escherichia coli*; preparation, substrates, partial purification, *Lehman, Bessman, Simms, and Kornberg,* 163
—; general properties, *Bessman, Lehman, Simms, and Kornberg,* 171
Fluorometric measurement, animal tissues, central nervous system, *Kissane and Robins,* 184
Thymidine, incorporation, enzymes, rat tissues, *Bollum and Potter,* 478
Thymine, fluorometric determination, and derivatives, *Roberts and Friedkin,* 483
Deoxyribose: Biosynthesis, *Escherichia coli, Bernstein and Sweet,* 1194
Carbon labeled, bacterial degradation, *Bernstein, Fossitt, and Sweet,* 1199
Deoxyribose-5-phosphate: Metabolism, normal liver, malignant hepatoma, *Boxer and Shonk,* 535
Deoxyribosylase: Trans-*N*-, purification, properties, *Roush and Betz,* 261
Desulfurase: Cystine, activity, mouse tumors, *Stekol, Weiss, and Anderson,* 936
Deuteriolactate: DL-2-, glycogen, deuterium location, substrate oxidation, reductive biosyntheses, *Hoberman,* 1045
Deuterium: Condensing enzyme, acetyl coenzyme A, *Marcus and Vennesland,* 727
Location, glycogen from DL-2-deuteriolactate; substrate oxidation, reductive biosyntheses, *Hoberman,* 1045
Diaminopimelic acid: Enzymatic synthesis, *Gilvarg,* 1501
Diethanolamine: Incorporation *in vivo*, liver lipides, *Artom, Lofland, and Oates,* 833
Digitonin: Phosphorylating subfragments, preparation, rat liver mitochondria, *Devlin and Lehninger,* 1586
Dihydrofolic acid: Enzymatic reduction, *Osborn and Huennekens,* 969
Dihydroorotic dehydrogenase: Purification, properties, *Friedmann and Vennesland,* 1398
Dihydroxyfumarate: See oxaloglycolate
Dihydrouracil: Hydrase, purification, properties; pyrimidines, reductive degradation, *Campbell,* 1236
Diiodotyrosine: Deiodination, cell-free systems, *Stanbury and Morris,* 106
Diisopropylphosphoryl: Binding, amino acid sequence, diisopropylphosphoryl-trypsin, *Dixon, Kauffman, and Neurath,* 1373
Diisopropylphosphoryl-trypsin: Amino acid sequence, diisopropylphosphoryl binding, *Dixon, Kauffman, and Neurath,* 1373
Diketosuccinate: Nonenzymatic decarboxylation, and oxaloglycolate (dihydroxyfumarate), *Chow and Vennesland,* 997
Dimethylcholesterols: 4,4-, isomeric, synthesis, lanosterol metabolite, identification, *Gautschi and Bloch,* 1343
Dimethyl phenylmyristic acid: 3,3-, metabolism, *Goodman and Steinberg,* 1066
Dinitrophenol: 2,4-, mode of action, uncoupling oxidative phosphorylation, *Drysdale and Cohn,* 1574
Diphosphoglycerate: 2,3-, enzymatic synthesis, isolation, *Grisolia and Joyce,* 18
Diphosphopyridine: Reduced, nucleotide oxidase system, lipide components, and succinate, *Joel, Karnovsky, Ball, and Cooper,* 1565
Disulfide: Bonds, cleavage, trypsinogen, α-chymotrypsinogen, *Pechère, Dixon, Maybury, and Neurath,* 1364

E

Electron transport: Enzymes, studies; purification, cytochrome 556, pig liver, *Raw, Molinari, do Amaral, and Mahler,* 225

Electron transport—*continued:*
Enzymes, studies; reduced diphosphopyridine nucleotide, cytochrome specific, isolation, properties, pig liver, *Mahler, Raw, Molinari, and do Amaral,* 230
Inhibition, *Escherichia coli*; aureomycin, enzymatic basis of resistance, *Saz and Martinez,* 1020
Internal, iron; xanthine oxidase, *Fridovich and Handler,* 1581
Lipides; cytochrome *c*, reductase lipide cofactor, purification, identification, *Donaldson, Nason, Lehman, and Nickon,* 566
—; tocopherol, cofactor, mammalian cytochrome *c* reductase, *Donaldson, Nason, and Garrett,* 572
Embryo: Avian, enzymes, citric acid cycle, *Mahler, Wittenberger, and Brand,* 770
Enol borate-tautomerase: Method, aromatic amino acid transamination, assay, keto acid oxidase, *Lin, Pitt, Civen, and Knox,* 668
Enzyme(s): Activity, cell cultures, mammalian, *Lieberman and Ove,* 634
Citric acid cycle, avian embryo, *Mahler, Wittenberger, and Brand,* 770
Cleavage, canavanine, homoserine, hydroxyguanidine, *Kalyankar, Miyoshi, and Snell,* 1175
—, deoxyguanosine triphosphate, deoxyguanosine and tripolyphosphate, *Kornberg, Lehman, Bessman, Simms, and Kornberg,* 159
Conversion, 5-dehydroshikemic acid, protocatechuic acid, *Gross,* 1146
Degradation of urocanic acid, *Revel and Magasanik,* 930
Estrogen-sensitive, human placenta, identity, *Villee and Hagerman,* 42
Malic, pigeon liver, purification, properties, *Rutter and Lardy,* 374
Mevalonic kinase, purification and properties, *Tchen,* 1100
Phosphorylation, deoxycytidylic acid, *Maley and Ochoa,* 1538
Purification and properties, ribitol dehydrogenase, *Fromm,* 1049
Rat tissues, thymidine incorporation, deoxyribonucleic acid, *Bollum and Potter,* 478
Reactions, sulfate, sulfite, selenate, and molybdate, *Wilson and Bandurski,* 975
Reduction, dihydrofolic acid, *Osborn and Huennekens,* 969
Enzyme(s)—*continued:*
Stable substrate complexes: fatty acyl derivatives, dehydrogenation mechanism, coenzyme A, *Steyn-Parvé and Beinert,* 843
Sulfhydryl groups; L-glutamic acid dehydrogenase, *Hellerman, Schellenberg, and Reiss,* 1468
Synthesis, δ-aminolevulinic acid, *Kikuchi, Kumar, Talmage, and Shemin,* 1214
—, diaminopimelic acid, *Gilvarg,* 1501
—, inositol phosphotide, *Agranoff, Bradley, and Brady,* 1077
—, sphingomyelin, *Sribney and Kennedy,* 1315
—, sphingosine; mechanism, *Brady, Formica, and Koval,* 1072
System, estrogen-sensitive, placental homogenates, structural specificity, *Hollander, Nolan, and Hollander,* 580
—, soluble and mitochondrial, properties; monoiodotyrosine, synthesis, *Serif and Kirkwood,* 109
Tyrosine-activating, hog pancreas, purification and properties, *Schweet and Allen,* 1104
Epinephrine: *O*-methylation, enzymatic, and other catechols, *Axelrod and Tomchick,* 702
Epiphyseal plate: Long bone, chemical composition; content of amino acids, *Castellani and Castellani-Bisi,* 920
Escherichia coli: Deoxyribose, biosynthesis, *Bernstein and Sweet,* 1194
Electron transport inhibition; aureomycin, enzymatic basis of resistance, *Saz and Martinez,* 1020
Isoleucine, valine, metabolism; acetolactate formation, *Umbarger and Brown,* 1156
Metabolism, isoleucine, valine; isoleucine biosynthesis, negative feedback mechanism, *Umbarger and Brown,* 415
Strain B, normal, T2r-infected cells, acid-soluble fraction, analysis, *O'Donnell, Mackal, and Evans,* 1523
Substrate and partial purification; deoxyribonucleic acid, enzymatic synthesis, *Lehman, Bessman, Simms, and Kornberg,* 163
Ester: Ethyl, benzoyl-L-arginine, hydrolysis, kinetics, papain action, *Smith and Parker,* 1387
Estradiol: Analysis, methods, and estrone, estriol, human urine extracts, *Gallagher, Kraychy, Fishman, Brown, and Marrian,* 1093
Estradiol-17β: Biosynthesis *in vitro*, follicle-stimulating hormone, effect, from acetate-1-C^{14}, testosterone-4-C^{14}, *Hollander and Hollander,* 1097
Estradiol-17-dehydrogenase: Human placental; concentration, characterization, assay, *Langer and Engel,* 583
Estriol: Analysis, methods, and estrone, estradiol, human urine extracts, *Gallagher, Kraychy, Fishman, Brown, and Marrian,* 1093
Estrogen: Enzyme, human placenta, identity, *Villee and Hagerman,* 42
Estrone: Analysis, methods, and estradiol, estriol, human urine extracts, *Gallagher, Kraychy, Fishman, Brown, and Marrian,* 1093
Ethanolamine: Deoxycytidine diphosphate, and deoxycytidine choline, Novikoff hepatoma; phosphorus compounds, animal tissues, *Schneider and Rotherham,* 948
Quantitative estimation, and serine, phospholipides, *Dittmer, Feminella, and Hanahan,* 862
Ethionine: Inhibition, sex difference, hepatic protein synthesis, *Farber and Corban,* 625
Methionine ratio, diet, glucose-6-phosphatase adaptation; metabolic adaptations, higher animals, *Freedland and Harper,* 1041

F

Fat(s): Absorption and cholesterol, and serum lipoproteins, lymph composition and concentration, *Hillyard, Chaikoff, Entenman, and and Reinhardt,* 838
—, chyluria; cholesterol, *Blomstrand and Ahrens,* 327
—, —, palmitic and oleic acids, *Blomstrand and Ahrens,* 321
Animal, vegetable, fatty acid distribution, glycerides, *Mattson and Lutton,* 868
Dietary, influence, hepatic lipogenesis, regulation, *Hill, Linazasoro, Chevallier, and Chaikoff,* 305
Fatty acid(s): Distribution, glycerides, animal, vegetable fats, *Mattson and Lutton,* 868
Nonoxidizable analogue, 3,3-dimethyl phenylmyristic acid, metabolism, *Goodman and Steinberg,* 1066

Fibrinolysin: *See* Plasmin
Fluorescence: Spectra, polarization, glyceraldehyde-3-phosphate, lactic dehydrogenase, coenzyme complexes, *Velick*, 1455
Fluoride: Bone salt, solubility, *Kutnerian and Kuyper*, 760
Fluorometry: Determination, thymine, deoxyribonucleic acid, derivatives, *Roberts and Friedkin*, 483
Measurement, deoxyribonucleic acid, animal tissues, central nervous system, *Kissane and Robins*, 184
Folic acid: Conversion to citrovorum factor, studies *in vivo*, *Doctor*, 982
Deficiency, formic acid, formiminoglutamic acid, urinary secretion, *Rabinowitz and Tabor*, 252
Dihydro-, enzymatic reduction, *Osborn and Huennekens*, 969
Formate: Sodium, -C^{14}, metabolism; vitamin E, deficiency, monkey, *Dinning and Day*, 240
Formic acid: Urinary excretion, folic acid deficiency, and formiminoglutamic acid, *Rabinowitz and Tabor*, 252
Formiminoglutamic acid: Excretion, dietary methionine, by rat, *Silverman and Pitney*, 1179
Urinary secretion, folic acid deficiency, and formic acid, *Rabinowitz and Tabor*, 252
Fructose-6-phosphate: Phosphorolytic cleavage, by fructose-6-phosphate phosphoketolase, *Acetobacter xylinum, Schramm, Klybas, and Racker*, 1283
Fumarase: Electrophoresis, titration, *Shavit, Wolfe, and Alberty*, 1382
Fumarate: Enzymatic amination, hydration, mechanism, *Englard*, 1003

G

Galactolipides: Galactose incorporation, *Burton, Sodd, and Brady*, 1053
Galactose: Incorporation, galactolipides, *Burton, Sodd, and Brady*, 1053
Gaucher's disease: Cerebroside, reinvestigation, *Rosenberg and Chargaff*, 1323
Globin: Glycine incorporation, rabbit bone marrow *in vitro*, heme biosynthesis, *Morell, Savoie, and London*, 923
Globulin: Abnormal human serum; physical constants, amino end groups, *Putnam*, 1448
Glucagon: Material in blood, man and dog, *Makman, Makman, and Sutherland*, 894
Glucan: β-1,3-linked, synthesis, *Phaseolus aureus* seedlings, *Feingold, Neufeld, and Hassid*, 783
Glucosamine: Carbohydrate metabolism, rat liver, and *N*-acetylglucosamine, *Spiro*, 546
Glucose: *Acetobacter suboxydans*, and gluconate dissimilation, *Kitos, Wang, Mohler, King, and Cheldelin*, 1295
Carbon labeled, metabolism, rabbit lens, study, *Kinoshita and Wachtl*, 5
Catabolism, fetal, adult, heart, *Jolley, Cheldelin, and Newburgh*, 1289
Effect, and nucleosides, purine synthesis, Ehrlich ascites tumor cells *in vitro*, *Harrington*, 1190
Metabolism, insulin, effects, and pyruvate, acetate; rat adipose tissue, *in vitro*, studies, *Winegrad and Renold*, 267
Specifically labeled, metabolism, insulin, effects; rat adipose tissue, *in vitro*, studies, *Winegrad and Renold*, 273
Uptake, and insulin degradation, muscle, protein added *in vitro*, effect, *Narahara and Williams*, 1034
Utilization, kidney tissue, 6-deoxy-6-fluoroglucose, *Serif and Wick*, 559
Glucose-6-phosphatase: Adaptation, ethionine: methionine ratio, diet; metabolic adaptations, higher animals, *Freedland and Harper*, 1041
Glucose-6-phosphate: Dietary factors, response; metabolic adaptations, higher animals, *Freedland and Harper*, 1
Glucosidase: β-, inducible, yeast, purification and properties, *Duerksen and Halvorson*, 1113
Glucosuria: Naringin, phloridzin, and metabolism, studies, *Booth, Jones, and DeEds*, 280
Glutamate: Precursor for pyrrolidine ring, nicotine, *Lamberts and Byerrum*, 939
Glutamic acid: L-, dehydrogenase: enzyme sulfhydryl groups, *Hellerman, Schellenberg, and Reiss*, 1468
Glutaminase: Phosphate-activated, kidneys, preparation and properties, *Sayre and Roberts*, 1128
Glutamyl: D- and L-, polypeptides, isolation, culture filtrates, *Bacillus subtilis, Thorne and Leonard*, 1109
Glutathione: Catalytic oxidation, and other sulfhydryl compounds, selenite, *Tsen and Tappel*, 1230
Erythrocyte, vitamin E deficiency, effect, and tissue, *Ryerson, McMillan, and Mortensen*, 1172
Reduced, determination, spectrophotometric method, *Avi-Dor and Lipkin*, 69
Glyceraldehyde: -3-phosphate, coenzyme complexes, fluorescence spectra, polarization, and lactic dehydrogenase, *Velick*, 1455
Glycerate-2,3-diphosphate: Studies, *Joyce and Grisolia*, 350
Glyceride: Animal, vegetable fats, fatty acid distribution, *Mattson and Lutton*, 868
Glycerol: Indicator, triose phosphate isomerase reaction, pentose cycle, C^{14} in and lactose, serine; lactose synthesis, *Wood, Gillespie, Joffe, Hansen, and Hardenbrook*, 1271
Spontaneous activation of human plasminogen in, *Alkjaersig, Fletcher, and Sherry*, 81
Glycerol-1,3-C^{14}: Unilateral injection, pudic artery, milk constituents; lactose synthesis, *Wood, Joffe, Gillespie, Hansen, and Hardenbrook*, 1264
Glycerophosphate: α-, oxidase, flight muscle mitochondria, *Estabrook and Sacktor*, 1014
Glycine: Incorporation into globin, rabbit bone marrow *in vitro*, heme biosynthesis, *Morell, Savoie, and London*, 923
Glycine-2-C^{14}: Incorporation, total proteins, nucleic acids, lymphocytes *in vitro*, steroids, metabolic inhibitors, effects, *Blecher and White*, 1161
Glycogen: Binding, phosphorylase, *Madsen and Cori*, 1251
DL-2-deuteriolactate, deuterium location, substrate oxidation, reductive biosyntheses, *Hoberman*, 1045
Glycolic acid: Oxidase, role, respiration, leaves, *Zelitch*, 1299
Glycolysis: Yeast, biotin in, *Strauss and Moat*, 765
Guanosine 5'-phosphate: Biosynthesis; xanthosine 5'-phosphate, amination, purified pigeon liver enzyme, *Lagerqvist*, 143
—; —, —, intermediate, *Lagerqvist*, 138

H

Heart: Fetal, adult, glucose metabolism, *Jolley, Cheldelin, and Newburgh,* 1289

Sarcosomes, pyruvate metabolism, α-(+)-lipoic acid, *Reiss,* 789

Hemagglutinin: Soybean, composition, end groups, *Wada, Pallansch, and Liener,* 395

—, inactivation studies, *Liener,* 401

Heme: Biosynthesis, glycine into globin incorporation, rabbit bone marrow *in vitro, Morell, Savoie, and London,* 923

Hemin: Muscle, beef heart, *Connelly,* 743

Hemoglobin(s): Horse, sheep, dog, cow, titratable sulfhydryl groups, *Murayama,* 594

Human, cysteine content, *Cole, Stein, and Moore,* 1359

Heparin: β-, (chondroitinsulfuric acid-B), chemistry, *Cifonelli, Ludowieg, and Dorfman,* 541

Hepatoma: Novikoff, deoxycytidine diphosphate choline, deoxycytidine diphosphate ethanolamine; phosphorus compounds, animal tissues, *Schneider and Rotherham,* 948

Hexose: Phosphates, recycling, pentose cycle, effect, C^{14} distribution, *Wood and Katz,* 1279

Ribose biosynthesis, C-6 oxidation pathway; metabolism, *Hiatt and Lareau,* 1023

Histidine: Imidazole carbon 2, utilization, purines, bacteria, biosynthesis, *Revel and Magasanik,* 439

Metabolism; urinary metabolites, *Baldridge and Tourtellotte,* 125

Histochemistry: Hyaluronidase, microdetermination, inhibition, fractions, isolated mast cells, *Glick, Ottoson, and Edmondson,* 1241

Histone: Calf thymus, fractionation, *Luck, Rasmussen, Satake, and Tsvetikov,* 1407

Homogenate: Placental, estrogen-sensitive enzyme system, structural specificity, *Hollander, Nolan, and Hollander,* 580

Homoserine: Canavanine, enzymatic cleavage, and hydroxyguanidine, *Kalyankar, Miyoshi, and Snell,* 1175

Hormone(s): Adrenocorticotropic, activation, adrenal phosphorylase, *Haynes,* 1220

Follicle-stimulating, effect, biosynthesis *in vitro,* estradiol-17β, from acetate-1-C^{14}, testosterone-4-C^{14}, *Hollander and Hollander,* 1097

—, exogenous requirements, action *in vitro,* rat adrenal glands, *Péron and Koritz,* 256

Growth, *C*-terminal amino acid, sequence, human, monkey, whale, and sheep, pituitary glands, *Li, Parcells, and Papkoff,* 1143

—, effects, protein synthesis, and ribonucleoprotein particle, role, *Balis, Samarth, Hamilton, and Petermann,* 1152

—, *N*-terminal amino acid, analysis, human, monkey, whale, and beef, pituitary glands, *Parcells and Li,* 1140

Lactogenic, pituitary, ovine, *C*-terminus, nature of, *Li and Cummins,* 73

α- and β-melanocyte-stimulating, hog posterior pituitary powder, *Lee,* 917

Ovine, pituitary lactogenic, *C*-terminus, nature of, *Li and Cummins,* 73

—, —, disulfide bridges, reduction, *C*-terminus nature; studies, *Li and Cummins,* 73

Pituitary, lactogenic, studies; ovine, disulfide bridges, reduction, *C*-terminus nature, *Li and Cummins,* 73

—, protein, separation, scheme, *Ellis,* 63

Posterior pituitary, synthetic analogue, arginine-vasotocin, oxytocin ring, vasopressin side chain, *Katsoyannis and du Vigneaud,* 1352

Hyaluronidase: Microdetermination, inhibition, fractions, isolated mast cells, *Glick, Ottoson, and Edmondson,* 1241

Hydrase: Dihydrouracil, purification, properties; pyrimidines, reductive degradation, *Campbell,* 1236

Hydrogen: Ketosteroid, sulfates, hydrolysis, solvolysis, *Burstein and Lieberman,* 331

Transfer, enzymatic; β-hydroxybutyryl dehydrogenase, catalyzed reaction, *Marcus, Vennesland and Stern,* 722

Hydroxybutyryl dehydrogenase: β-, catalyzed reaction; hydrogen, enzymatic transfer, *Marcus, Vennesland, and Stern,* 722

Hydroxyguanidine: Canavanine, enzymatic cleavage, and homoserine, *Kalyankar, Miyoshi, and Snell,* 1175

Hydroxyisovaleryl: β-, coenzyme A, biotin, carboxylation; carbon dioxide, enzymatic activation, *Woessner, Bachhawat, and Coon,* 520

Hydroxy-β-methylglutaryl: β-, coenzyme A deacylase, *Dekker, Schlesinger, and Coon,* 434

Hydroxyprogesterone: 17α-, and Δ^4-androstenedione, biosynthesis, progesterone, human fetal adrenals, *Solomon, Lenman, Lind, and Lieberman,* 1084

Hydroxyquinaldic acid: 8-, xanthurenic acid, dehydroxylation, *Takahashi and Price,* 150

Hydroxysteroid(s): 3α-, coenzymes, hydrogen transfer, di- and triphosphopyridine nucleotides, *Hurlock and Talalay,* 886

Hypertension: Experimental, renal extracts, *Hamilton and Grollman,* 528

I

Iduronic acid: L-, origin; metabolism, mucopolysaccharides, mammalian tissues, *Rodén and Dorfman,* 1030

Imidazole: Carbon 2, utilization, histidine, purines, bacteria, biosynthesis, *Revel and Magasanik,* 439

Derivatives, relation to histidine metabolism, *Baldridge and Tourtellotte,* 125

Quaternary pyridine derivatives, reaction, *van Eys,* 1203

Indoleacetic acid: Oxidase, pineapple, coenzyme requirement, enzyme inhibitors, *Gortner and Kent,* 731

Inositol: Phosphate exchange, acetylcholine, in brain phosphoinositide, *Hokin and Hokin,* 818

Inositol phosphatide: Synthesis, enzymatic, *Agranoff, Bradley, and Brady,* 1077

Insulin: Degradation, and glucose uptake, muscle, protein added *in vitro,* effect, *Narahara and Williams,* 1034

Effects, metabolism, glucose, pyruvate, acetate; rat adipose tissue, studies *in vitro, Winegrad and Renold,* 267

—, —, specifically labeled glucose; rat adipose tissue, *in vitro,* studies, *Winegrad and Renold,* 273

Tryptophan peroxidase, induction, and alloxan, *Schor and Frieden,* 612

Intestine: Digestion, absorption, studies *in vitro*, pyrimidine nucleotides, *Wilson and Wilson*, 1544
Ion: Exchange agents, cellulose, chromatography; mammalian tyrosinase, studies, *Brown and Ward*, 77
Iron: Content, tobacco mosaic virus, and infectious nucleic acid, properties, *Loring, Al-Rawi, and Fujimoto*, 1415
Internal electron transport; xanthine oxidase, *Fridovich and Handler*, 1581
Isocitrate: L$_s$(+)-, potassium dihydrogen, *Bryophyllum calycinum* leaves, preparation, *Vickery and Wilson*, 14
Isoleucine: Metabolism, and valine, *Escherichia coli*; acetolactate formation, *Umbarger and Brown*, 1156
—, *Escherichia coli*, and valine; isoleucine biosynthesis, negative feedback mechanism, *Umbarger and Brown*, 415
Isomerase: Triose phosphate reaction, and pentose cycle, C^{14}, lactose, glycerol, serine, indicators; lactose synthesis, *Wood, Gillespie, Joffe, Hansen, and Hardenbrook*, 1271
Isopyridoxal acid: Vitamin B$_6$, bacterial oxidation, and 5-pyridoxic acid, *Rodwell, Volcani, Ikawa, and Snell*, 1548

K

Keto acid(s): Oxidase, enol borate-tautomerase method, and aromatic amino acid transamination, *Lin, Pitt, Civen, and Knox*, 668
Ketocholesterol-23-C^{14}: 22-, synthesis, metabolism, *Kautsky, Bouboulis, Becker, and King*, 1340
Ketoglutaric acid: α-, γ-aminobutyric acid, transaminase, beef brain, *Baxter and Roberts*, 1135
Ketosteroid(s): Hydrogen sulfates, hydrolysis, solvolysis, *Burstein and Lieberman*, 331
β^4-3-, interaction, serum albumin, Δ-lactoglobulin, functional groups; steroid-protein, interaction, *Westphal and Ashley*, 57
Kidney: Acylase I; dialkylfluorophosphatase, comparison, *Bell and Mounter*, 900
—; substrate specificity, *Mounter, Dien, and Bell*, 903
Extracts, blood pressure, experimental hypertension, *Hamilton and Grollman*, 528
Kinase: Mevalonic, purification and properties, *Tchen*, 1100
Kinosynthase: 2-Amino-*N*-ribosylacetamide-5′-phosphate; purine biosynthesis, *Hartman and Buchanan*, 456

L

Lactobacillus arabinosus: Permeability, biotin, *Lichstein and Ferguson*, 243
Lactobacillus leichmannii: Vitamin B$_{12}$, thymine biosynthesis, *Dinning, Allen, Young, and Day*, 674
Lactobacillus plantarum: Pentose fermentation; 2-deoxy-D-ribose, *Domagk and Horecker*, 283
Lactoglobulin: β-, interaction, β^4-3-ketosteroids, serum albumin, functional groups; steroid-protein, interaction, *Westphal and Ashley*, 57
Lactose: Indicator, triose phosphate isomerase reaction, pentose cycle, labeled carbon in, and glycerol, serine; lactose synthesis, *Wood, Gillespie, Joffe, Hansen, and Hardenbrook*, 1271
Synthesis; labeled carbon, lactose, glycerol, serine, indicators, triose phosphate isomerase reaction, pentose cycle, *Wood, Gillespie, Joffe, Hansen, and Hardenbrook*, 1271
—, milk constituents, unilateral injection, glycerol-1,3-C^{14}, pudic artery, *Wood, Joffe, Gillespie, Hansen, and Hardenbrook*, 1264
Leaves: Respiration, glycolic acid oxidase, role, *Zelitch*, 1299
Levulinic acid: δ-Amino-, enzymatic synthesis, *Kikuchi, Kumar, Talmage, and Shemin*, 1214
Lipide(s): Complex mixtures, separation, silicic acid chromatography, *Hirsch and Ahrens*, 311
Components, succinate, and reduced diphosphopyridine nucleotide oxidase system, *Joel, Karnovsky, Ball, and Cooper*, 1565
Electron transport; cytochrome *c*, reductase lipide cofactor, purification, identification, *Donaldson, Nason, Lehman, and Nickon*, 566
—; tocopherol, cofactor, mammalian cytochrome *c* reductase, *Donaldson, Nason, and Garrett*, 572
Galacto-, galactose incorporation, *Burton, Sodd, and Brady*, 1053
Liver, diethanolamine, incorporation *in vivo*, *Artom, Lofland, and Oates*, 833
Phospho-, purification, identification, thromboplastic activity, *Therriault, Nichols, and Jensen*, 1061
Lipogenesis: Hepatic, regulation, dietary fats, influence, *Hill, Linazasoro, Chevallier, and Chaikoff*, 305
Lipoic acid: α-(+)-, pyruvate metabolism, heart sarcosomes, *Reiss*, 789
Lipoprotein(s): Lymph and serum, composition, concentration, fat and cholesterol absorption, *Hillyard, Chaikoff, Entenman, and Reinhardt*, 838
Uptake, ascites tumor cells; fatty acid-albumin complex, *Fillerup, Migliore, and Mead*, 98
Liver: Beef, glutamic dehydrogenase, zinc, *Adelstein and Vallee*, 589
Bovine, aldolase; crystalline enzyme, measurements, physical, chemical, *Peanasky and Lardy*, 371
—; isolation, crystallization, general properties, *Peanasky and Lardy*, 365
Extracts, animals deprived of tocopherol, ascorbic acid synthesis, Mn^{++} and Co^{++} requirements, *Caputto, McCay, and Carpenter*, 1025
Mitochondria, and muscle, protein, labeled amino acids, incorporation, *McLean, Cohn, Brandt, and Simpson*, 657
Normal, malignant hepatoma, deoxyribose-5-phosphate, metabolism, *Boxer and Shonk*, 535
Phosphorylase, organic phosphate moiety, studies, *Wosilait*, 597
Protein, synthesis, ethionine inhibition, sex difference, *Farber and Corban*, 625
Rat, carbohydrate metabolism, *N*-acetylglucosamine, glucosamine, *Spiro*, 546
Luciferyl-adenylate: Synthesis, function, and oxyluciferyl-adenylate, *Rhodes and McElroy*, 1528
Lymph: Lipoproteins, and serum, composition and concentration, fat and cholesterol absorption, *Hillyard, Chaikoff, Entenman, and Reinhardt*, 838

M

Medulla: Adrenal, phospholipides and adrenaline secretion in, *Hokin, Benfey, and Hokin*, 814

Melanocyte: α- and β-, stimulation, hormone, hog posterior pituitary powder, *Lee*, 917
Metabolic inhibitors: Effects, and steroids, glycine-2-C^{14} incorporation, total proteins, nucleic acids, lymphocytes *in vitro*, *Blecher and White*, 1161
Metabolism: Acetate, insulin, effects; rat adipose tissue, *in vitro*, studies, *Winegrad and Renold*, 267
Adaptation, higher animals; dietary factors, response, liver glucose-6-phosphatase, *Freedland and Harper*, 1
—, —; ethionine: methionine ratio, diet, glucose-6-phosphatase adaptation, *Freedland and Harper*, 1041
C^{14}-glucose, rabbit lens, study, *Kinoshita and Wachtl*, 5
Carbohydrate, *N*-acetylglucosamine, glucosamine, rat liver, *Spiro*, 546
—, rat liver; alterations, dietary variation, *Landau, Hastings, and Zottu*, 1257
Cholesterol, scorbutic guinea pigs, *Banerjee and Singh*, 336
Deoxyribose-5-phosphate, normal liver, malignant hepatoma, *Boxer and Shonk*, 535
3,3-Dimethyl phenylmyristic acid, *Goodman and Steinberg*, 1066
Glucose, insulin, effects; rat adipose tissue, *in vitro*, studies, *Winegrad and Renold*, 267
—, specifically labeled, insulin, effects; rat adipose tissue, *in vitro*, studies, *Winegrad and Renold*, 273
Isoleucine, *Escherichia coli*, and valine; isoleucine biosynthesis, negative feedback mechanism, *Umbarger and Brown*, 415
—, valine, *Escherichia coli*: acetolactate formation, *Umbarger and Brown*, 1156
22-Ketocholesterol-23-C^{14}, and synthesis, *Kautsky, Bouboulis, Becker, and King*, 1340
Methionine, pectin esterification, plant tissue, *Sato, Byerrum, Albersheim, and Bonner*, 128
Mucopolysaccharides, mammalian tissues; L-iduronic acid origin, *Rodén and Dorfman*, 1030
Naringin, phloridzin, and glucosuria, studies, *Booth, Jones, and DeEds*, 280
Nucleotide; ribonucleic acid, rat
Metabolism—*continued:*
liver, heterogenous labeling, *Schneider and Potter*, 154
Organic acids, tobacco; excised leaves, culture, potassium phosphate solutions, *Vickery and Levy*, 1304
Prednisolone, rat liver homogenates, *Vermeulen and Caspi*, 54
Pyridine nucleotide; mechanism of action, niacin antagonist, 6-aminonicotinamide, *Dietrich, Friedland, and Kaplan*, 964
Pyruvate, heart sarcosomes, α-(+)-lipoic acid, *Reiss*, 789
—, insulin, effects; rat adipose tissue, *in vitro*, studies, *Winegrad and Renold*, 267
—, tricarboxylic acid cycle, *Freedman and Graff*, 292
Ribose; biosynthesis from hexose, C-6 oxidation pathway, *Hiatt and Lareau*, 1023
Sodium formate-C^{14}; vitamin E, deficiency, monkey, *Dinning and Day*, 240
Valine, *Escherichia coli*, and isoleucine; isoleucine biosynthesis, negative feedback mechanism, *Umbarger and Brown*, 415
Metabolite(s): Lanosterol, identification, isomeric 4,4-dimethylcholesterols, synthesis, *Gautschi and Bloch*, 1343
Urinary; histidine, metabolism, *Baldridge and Tourtellotte*, 125
Methionine: Dietary, formiminoglutamic acid excretion, by rat, *Silverman and Pitney*, 1179
Methionine: Ethionine ratio, diet, glucose-6-phosphatase adaptation; metabolic adaptations, higher animals, *Freedland and Harper*, 1041
Metabolism, plant tissue, and pectin esterification, *Sato, Byerrum, Albersheim, and Bonner*, 128
Spermidine and spermine biosynthesis, and putrescine, *Tabor, Rosenthal, and Tabor*, 907
Methylation: *O*-, catechol amines, *in vivo*, *Axelrod, Senoh, and Witkop*, 697
—, enzymatic, epinephrine, other catechols, *Axelrod and Tomchick*, 702
Mevalonic acid: Enzymatic synthesis, rubber, *Park and Bonner*, 340
Mevalonic kinase: Purification and properties, *Tchen*, 1100
Micrococcus lysodeikticus: Nonpyridine nucleotide malic dehydrogenase, oxalacetic acid, enzymatic formation, *Cohn*, 299
Microsome(s): Brain, acetylcholine, phosphate exchange, phosphatidic acid, *Hokin and Hokin*, 822
Liver, amino acid incorporating system, *Sachs*, 643
—, —, pyrophosphate, *Sachs*, 650
liver, rat, tetralin-*p*-quinol, protein-bound derivative, formation, tetrahydro-2-naphthol-8-C^{14}, *Hecker and Mueller*, 991
Milk: Constituents, synthesis, unilateral injection, glycerol-1,3-C^{14}, pudic artery; lactose synthesis, *Wood, Joffe, Gillespie, Hansen, and Hardenbrook*, 1264
Mitochondria: Flight muscle, α-glycerophosphate oxidase, *Estabrook and Sacktor*, 1014
—, serum albumin requirement, oxidative phosphorylation, *Sacktor, O'Neill, and Cochran*, 1233
Liver, rat phosphorylating subfragments, preparation, digitonin, *Devlin and Lehninger*, 1586
Muscle and liver, protein, labeled amino acids, incorporation, *McLean, Cohn, Brandt, and Simpson*, 657
Phosphorylation, oxidative, freezing, storage, low temperatures, *Privitera, Greiff, Strength, Anglin, and Pinkerton*, 524
Molybdate: Enzymatic reactions, and sulfate, sulfite, and selenate, *Wilson and Bandurski*, 975
Monoiodotyrosine: Synthesis, enzyme systems; soluble and mitochondrial systems, properties, *Serif and Kirkwood*, 109
Mn^{++}: Requirements, and Co^{++}, ascorbic acid synthesis, liver extracts, animals deprived of tocopherol, *Caputto, McCay, and Carpenter*, 1025
Mucopolysaccharide(s): Mammalian tissues, metabolism; L-iduronic acid origin, *Rodén and Dorfman*, 1030
Muscle: Flight, mitochondria, serum albumin requirement, oxidative phosphorylation, *Sacktor, O'Neill, and Cochran*, 1233
Heart, beef, hemins, *Connelly*, 743
Mitochondria, and liver, protein, labeled amino acids, incorporation, *McLean, Cohn, Brandt, and Simpson*, 657

N

Naphthylalanine: β-1-, inhibition studies, and β-2-thienylalanine, *p*-tolylalanine, peptides, *Dunn*, 411

Naringin: Metabolism, glucosuria, studies, and phloridzin, *Booth, Jones, and DeEds*, 280

Niacin: Antagonist, 6-aminonicotinamide, mechanism of action; pyridine nucleotide metabolism, *Dietrich, Friedland, and Kaplan*, 964

Nicotine: Pyrrolidine ring, glutamate, precursor, *Lamberts and Byerrum*, 939

Nitrogen: Retention, amino acid imbalance, adult rats, *Kumta, Harper, and Elvehjem*, 1505

Nucleic acid(s): Glycine-2-C^{14} incorporation, and total proteins, lymphocytes *in vitro*, steroids, metabolic inhibitors, effects, *Blecher and White*, 1161

Infectious, properties, and tobacco mosaic virus, iron content, *Loring, Al-Rawi, and Fujimoto*, 1415

Nucleoside(s): Effect, and glucose, purine synthesis, Ehrlich ascites tumor cells *in vitro*, *Harrington*, 1190

Purine, carbon skeleton adenosine, ribonucleic acid, deoxyribonucleic acid, *Neurospora, McNutt*, 193

Pyrimidine, carbon skeleton incorporation, cytidine, ribonucleic acid, deoxyribonucleic acid, *Neurospora, McNutt*, 189

Nucleotide(s): Cytochrome reductase, microsomal, interaction, *Strittmatter*, 748

Di- and triphosphopyridine, 3α-hydroxy-steroids, coenzymes, hydrogen transfer, *Hurlock and Talalay*, 886

Diphosphopyridine, biosynthesis; enzymatic aspects, *Preiss and Handler*, 493

—, —; identification, intermediates, *Preiss and Handler*, 488

Enzymatic conjugation, phenols, sulfate, *Brunngraber*, 472

Metabolism; ribonucleic acid, rat liver, heterogeneous labeling, *Schneider and Potter*, 154

Nonpyridine, malic dehydrogenase, *Micrococcus lysodeikticus*, oxalacetic acid, enzymatic formation, *Cohn*, 299

Nucleotide(s)—*continued:*

Oxidase system, reduced diphosphopyridine, lipide components, and succinate, *Joel, Karnovsky, Ball, and Cooper*, 1565

Pyridine, metabolism; mechanism of action, niacin antagonist, 6-aminonicotinamide, *Dietrich, Friedland, Kaplan*, 964

Pyridine, photoreduction, *Rhodospirillum rubrum*, cell-free extracts, chromatophores, *Vernon*, 212

Pyrimidine, digestion, absorption, intestine, studies *in vitro*, *Wilson and Wilson* 1544

Reduced diphosphopyridine, dehydrogenase, cytochrome-specific, isolation, properties, pig liver: electron transport enzymes, studies, *Mahler, Raw, Molinari, and do Amaral*, 230

—, oxidase, azotobacter, purification, properties, *Repaske and Josten*, 466

—, —, inhibition, *Rhodospirillum rubrum* chromatophores, illumination, *White and Vernon*, 217

Tri-, hydrolysis; deoxyribonuclease specificity, *Potter, Laurila, and Laskowski*, 915

O

Oleic acid: fats, absorption, chyluria, and palmitic acid, *Blomstrand and Ahrens*, 321

***O*-phosphoserine phosphatase:** Baker's yeast, *Schramm*, 1169

Organic acid(s): Metabolism, tobacco; excised leaves, culture, potassium phosphate solutions, *Vickery and Levy*, 1304

Oxalacetic acid: Enzymatic formation, nonpyridine nucleotide malic dehydrogenase, *Micrococcus lysodeikticus, Cohn*, 299

Oxaloglycolate: Nonenzymatic decarboxylation, and diketosuccinate, *Chow and Vennesland*, 997

Oxidase: Cytochrome, purified preparation, phosphatide composition, *Marinetti, Erbland, Kochen, and Stotz*, 740

—, rat tissues, and peroxidase, *Neufeld, Levay, Lucas, Martin, and Stotz*, 209

α-Glycerophosphate, flight muscle mitochondria, *Estabrook and Sacktor*, 1014

Glycolic acid role, respiration, leaves, *Zelitch* 1299

Oxidase—*continued:*

Reaction, amino acid synthesis, reversal, *Radhakrishnan and Meister*, 444

Reduced diphosphopyridine nucleotide system, lipide components, and succinate, *Joel, Karnovsky, Ball, and Cooper*, 1565

Sarcosine, cofactor requirements, *Dac and Wriston*, 222

Succinic, system, cytochrome components, kinetics, inhibition, *Chance*, 1223

Xanthine, action, adenine 1-*N*-oxide; purine *N*-oxides, *Brown, Stevens, and Smith*, 1513

—; iron, internal electron transport, *Fridovich and Handler*, 1581

—; sulfite oxidation, ultra sensitive assay, *Fridovich and Handler*, 1578

Oxidation: Bacterial, vitamin B_6; "260 compound," structure, *Ikawa, Rodwell, and Snell*, 1555

Catalytic, glutathione, other sulfhydryl compounds, selenite, *Tsen and Tappel*, 1230

Glyoxylic acid, rat liver, *Nakada and Sund*, 8

Keto acid, enol borate-tautomerase method, and aromatic amino acid transamination, assay, *Lin, Pitt, Civen, and Knox*, 668

Sulfite, ultra sensitive assay; xanthine oxidase, *Fridovich and Handler*, 1578

Oxide(s): 1-*N*-, adenine, xanthine oxidase, action; purine *N*-oxides, *Brown, Stevens, and Smith*, 1513

N-, purine; xanthine oxidase, action, adenine 1-*N*-oxide, *Brown, Stevens, and Smith*, 1513

—, —; adenine 1-*N*-oxide derivatives, biological activities, *Brown, Clarke, Biesele, Kaplan, and Stevens*, 1509

Oxygen: Carboxyl, nonexchange, mammalian amino acid transport, *Christensen, Parker, and Riggs*, 1485

Oxyluciferyl-adenylate: Synthesis, function, and luciferyl-adenylate, *Rhodes and McElroy*, 1528

Oxytocin: Purification, protein complex, and vasopressin, *Acher, Light, and du Vigneaud*, 116

Ring, and vasopressin, side chain, posterior pituitary hormones, arginine-vasotocin, synthetic analogue, *Katsoyannis and du Vigneaud*, 1352

P

Palmitic acid: fats, absorption, chyluria, and oleic acid, *Blomstrand and Ahrens*, 321

Pancreas: Juice, bovine, proteins, *Keller, Cohen, and Neurath*, 344

Phosphoinositides, protein secretion, *Hokin and Hokin*, 805

Papain: Active site, and covalent "high energy" bonds, proteins, *Smith*, 1392

Kinetics, action; benzoyl-L-arginine ethyl ester, hydrolysis, *Smith and Parker*, 1387

Pectin: Esterification, metabolism, plant tissue, and methionine, *Sato, Byerrum, Albersheim, and Bonner*, 128

Pentose: Cycle, and triose phosphate isomerase reaction, C^{14}, lactose, glycerol, serine, indicators; lactose synthesis, *Wood, Gillespie, Joffe, Hansen, and Hardenbrook*, 1271

—, recycling, effect, hexose phosphates, C^{14} distribution, *Wood and Katz*, 1279

Pentose fermentation: *Lactobacillus plantarum;* 2-deoxy-D-ribose, *Domagk and Horecker*, 283

Peptide(s): Irish moss, *Chondrus crispus*, and amino acids, proteins, *Young and Smith*, 406

Peroxidase: Rat tissues, and cytochrome oxidase, *Neufeld, Levay, Lucas, Martin, and Stotz*, 209

Tryptophan, induction, insulin, alloxan, *Schor and Frieden*, 612

Uterine, characterization, *Martin, Neufeld, Lucas, and Stotz*, 206

Phaseolus aureus: Seedlings, β-1,3-linked glucan, synthesis, *Feingold, Neufeld, and Hassid*, 783

Phenethylbiguanide: Site of action, *Wick, Larson, and Serif*, 296

Phenol(s): Enzymatic conjugation, nucleotides, sulfate, *Brunngraber*, 472

Phloridzin: Metabolism, glucosuria, studies, and naringin, *Booth, Jones, and DeEds*, 280

Phosphatase: Alkaline, swine kidneys, preparation and properties, *Mathies*, 1121

Glucose-6-, adaptation, ethionine: methionine ratio, diet; metabolic adaptations, higher animals, *Freedland and Harper*, 1041

O-phosphoserine, Baker's yeast, *Schramm*, 1169

Phosphatase—*continued:*

Phosphoprotein, particulate, properties, *Paigen*, 388

Prostatic acid; anionic polymers, *Hummel, Anderson, and Patel*, 712

Phosphate(s): Carbamyl, synthetase, mechanism, action, *Metzenberg, Marshall, and Cohen*, 1560

Exchange, phosphatidic acid, brain microsomes, and acetylcholine, *Hokin and Hokin*, 822

Glutaminase activating, kidneys, preparation and properties, *Sayre and Roberts*, 1128

Glyceraldehyde-3-, coenzyme complexes, fluorescence spectra, polarization, and lactic dehydrogenase, *Velick*, 1455

Glyceraldehyde-3-, dehydrogenase, hydrolytic activity, *Park and Koshland*, 986

Hexose, recycling, pentose cycle, effect, C^{14} distribution, *Wood and Katz*, 1279

Inositol exchange, acetylcholine, in brain phosphoinositide, *Hokin and Hokin*, 818

Tri-, nucleoside, precursors, ribonucleic acid end groups, mammalian system, *Hecht, Zamecnik, Stephenson, and Scott*, 954

Triose isomerase reaction, and pentose cycle, C^{14}, lactose, glycerol, serine, indicators; lactose synthesis, *Wood, Gillespie, Joffe, Hansen, and Hardenbrook*, 1271

Phosphatide(s): Cell fractions, pig heart, *Marinetti, Erbland, and Stotz*, 562

Composition, cytochrome oxidase, purified preparation, *Marinetti, Erbland, Kochen, and Stotz*, 740

Phosphatidic acid: Acetylcholine, phosphate exchange, brain microsomes, *Hokin and Hokin*, 822

Animal tissues, *Hokin and Hokin*, 800

Phosphoinositide: Brain, inositol and phosphate exchange, acetylcholine in, *Hokin and Hokin*, 818

Pancreas, and protein secretion, *Hokin and Hokin*, 805

Phosphoketolase: Fructose-6-phosphate, phosphorolytic cleavage by, fructose-6-phosphate, *Acetobacter xylinum, Schramm, Klybas, and Racker*, 1283

Phospholipide(s): Adrenocorticotropin, corticosteroids, secretion, *Hokin, Saffran, Schally, and Zimmerman*, 811

Phospholipide(s)—*continued:*

Brain, purification, identification, thromboplastic activity, *Therriault, Nichols, and Jensen*, 1061

Ethanolamine and serine, quantitative estimation, *Dittmer, Feminella, and Hanahan*, 862

Secretion, adrenal medulla, and adrenaline, *Hokin, Benfey, and Hokin*, 814

Phosphopyridine(s): Di- and tri-, 3α-hydroxysteroids, coenzymes, hydrogen transfer, *Hurlock and Talalay*, 886

Phosphoribosylpyrophosphate: 5-, amidotransferase; purine biosynthesis, *Hartman and Buchanan*, 451

Phosphorus: Compounds, animal tissues; deoxycytidine diphosphate choline, deoxycytidine diphosphate ethanolamine, Novikoff hepatoma, *Schneider and Rotherham*, 948

Phosphorylase: Adrenal, activation, adrenocorticotropic hormone, *Haynes*, 1220

Binding, glycogen, *Madsen and Cori*, 1251

Liver, organic phosphate moiety, studies, *Wosilait*, 597

Phosphorylation: Enzymatic, deoxycytidylic acid, *Maley and Ochoa*, 1538

Oxidative, adenosine tri- and diphosphate, exchange reaction, *Wadkins and Lehninger*, 1589

—, coenzyme A, *McMurray and Lardy*, 754

—, flight muscle mitochondria, serum albumin requirement, *Sacktor, O'Neill, and Cochran*, 1233

—, respiratory enzymes; intramitochondrial reduced pyridine nucleotide, binding, *Chance and Baltscheffsky*, 736

—, mitochondrial suspensions, freezing, storage, low temperatures, *Privitera, Greiff, Strength, Anglin, and Pinkerton*, 524

—, uncoupling, 2,4-dinitrophenol, mode of action, *Drysdale and Cohn*, 1574

Phytoglycolipides: Structure; sphingolipides, biochemistry, *Carter, Gigg, Law, Nakayama, and Weber*, 1309

Pituitary: Human, monkey, whale, and beef, growth hormones, *N*-terminal amino acid, analysis, *Parcells and Li*, 1140

Pituitary—*continued:*
Human, monkey, whale, beef and sheep, growth hormones, *C*-terminal amino acid, sequence, *Li, Parcells, and Papkoff*, 1143
Posterior, powder, α- and β-melanocyte-stimulating hormone, *Lee*, 917
Plasmin: Fibrinolysin, physicochemical studies, and human plasminogen, *Shulman, Alkjaersig, and Sherry*, 91
Plasminogen: Human, activation in glycerol, *Alkjaersig, Fletcher, and Sherry*, 81
Placenta: Human, estrogen-sensitive, enzyme, *Villee and Hagerman*, 42
—, —; trypsin, urokinase, streptokinase, kinetic study, *Alkjaersig, Fletcher, and Sherry*, 86
—, profibrinolysin, physicochemical studies, and plasmin, *Shulman, Alkjaersig, and Sherry*, 91
Polarization: Fluorescence spectra, glyceraldehyde-3-phosphate, lactic dehydrogenase, coenzyme complexes, *Velick*, 1455
Polymer(s): Anionic; prostatic acid phosphatase, *Hummel, Anderson, and Patel*, 712
—; ribonuclease, inhibition, *Hummel, Flores, and Nelson*, 717
Polypeptide(s): D- and L-Glutamyl, isolation, culture filtrates, *Bacillus subtilis, Thorne and Leonard*, 1109
Porphobilinogen: Enzymatic synthesis, porphyrin; uroporphyrin I, *Bogorad*, 501
—, —, uroporphyrin II, *Bogorad*, 510
—, —, uroporphyrin III, *Bogorad*, 516
Porphyrin(s): Enzymatic synthesis, porphobilinogen; uroporphyrin I, *Bogorad*, 501
—, —, uroporphyrin II, *Bogorad*, 510
—, —, uroporphyrin III, *Bogorad*, 516
Potassium: Migration, amino acid transport, *Riggs, Walker, and Christensen*, 1479
Potassium phosphate: Solutions, excised leaves, culture; metabolism, organic acids, tobacco, *Vickery and Levy*, 1304
Prednisolone: Metabolism, rat liver homogenates, *Vermeulen and Caspi*, 54
Profibrinolysin: *See* Plasminogen
Progesterone: Δ^4-Androstenedione, 17α-hydroxyprogesterone, biosynthesis, human fetal adrenals, *Solomon, Lenman, Lind, and Lieberman*, 1084
Protein(s): Association, vitamin A, ester and alcohol, rat liver, *Krishnamurthy, Mahadevan, and Ganguly*, 32
Biosynthesis, and vitamin B_{12}; relation, amino acid activation, *Wagle, Mehta, and Johnson*, 619
Bovine pancreatic juice, *Keller, Cohen, and Neurath*, 344
Complex, oxytocin, vasopressin, purification, *Acher, Light, and du Vigneaud*, 116
Covalent "high energy" bonds, and papain active site, *Smith*, 1392
Effect, added *in vitro*, insulin degradation, glucose uptake, muscle, *Narahara and Williams*, 1034
Glycine-2-C^{14} incorporation, and nucleic acids, lymphocytes *in vitro*, steroids, metabolic inhibitors, effects, *Blecher and White*, 1161
Growth factor, mammalian cells, culture, *Lieberman and Ove*, 637
Hepatic, synthesis, ethionine inhibition, sex difference, *Farber and Corban*, 625
Interaction, steroids; β^4-3-ketosteroids, serum albumin, Δ-lactoglobulin, functional groups, *Westphal and Ashley*, 57
Irish moss, *Chondrus crispus*, and amino acids, peptides, *Young and Smith*, 406
Mitochondria, muscle and liver, labeled amino acids, incorporation, *McLean, Cohn, Brandt, and Simpson*, 657
Pituitary, separation, scheme, *Ellis*, 63
Secretion, pancreas, and phosphoinositides, *Hokin and Hokin*, 805
Synthesis, ribonucleoprotein particle, role, growth hormone, effects, *Balis, Samarth, Hamilton, and Petermann*, 1152
Ultraviolet difference spectra, tyrosine groups, and amino acids, *Wetlaufer, Edsall, and Hollingworth*, 1421
Protocatechuic acid: Enzymatic conversion from, 5-dehydroshikimic acid, *Gross*, 1146
Purine(s): Bacteria, biosynthesis, imidazole carbon 2, histidine, utilization, *Revel and Magasanik*, 439
Biosynthesis; 2-amino-*N*-ribosylacetamide-5′-phosphate kinosynthase, *Hartman and Buchanan*, 456
—; 5-phosphoribosylpyrophosphate amidotransferase, *Hartman and Buchanan*, 451
N-oxides; adenine 1-*N*-oxide derivatives, biological activities, *Brown, Clarke, Biesele, Kaplan, and Stevens*, 1509
—; xanthine oxidase, action, adenine 1-*N*-oxide, *Brown, Stevens, and Smith*, 1513
Synthesis, glucose, nucleosides, effect, Ehrlich ascites tumor cells *in vitro*, *Harrington*, 1190
Putrescine: Spermidine and spermine biosynthesis, and methionine, *Tabor, Rosenthal, and Tabor*, 907
Pyridine: Derivatives, quaternary, reaction, imidazoles, *van Eys*, 1203
Di- and triphospho-, 3α-hydroxysteroids, coenzymes, hydrogen transfer, *Hurlock and Talalay*, 886
Reduced diphospho-, nucleotides, dehydrogenase, cytochrome specific, isolation, properties, pig liver: electron transport enzymes, studies, *Mahler, Raw, Molinari, and do Amaral*, 230
Reduced diphospho-, nucleotides, oxidase inhibition, *Rhodospirillum rubrum* chromatophores, illumination, *White and Vernon*, 217
Pyridine nucleotide(s): Metabolism; mechanism of action, niacin antagonist, 6-aminonicotinamide, *Dietrich, Friedland, and Kaplan*, 964
Photoreduction, cell-free extracts, chromatophores, *Rhodospirillum rubrum, Vernon*, 212
Reduced, intramitochondrial, binding; oxidative phosphorylation, respiratory enzymes, *Chance and Baltscheffsky*, 736
Pyridoxic acid: 4-, determination, human urine, *Reddy, Reynolds, and Price*, 691
5-, vitamin B_6, bacterial oxidation, and isopyridoxal acid, *Rodwell, Volcani, Ikawa, and Snell*, 1548
Pyrimidine(s): Reductive degradation; dihydrouracil hydrase, purification, properties, *Campbell*, 1236
Pyrimidine nucleotide(s): Digestion,

Pyrimidine nucleotide(s)—*continued:*
absorption, intestine, studies *in vitro*, *Wilson and Wilson*, 1544
Pyrophosphate: Effect, amino acid incorporating system, microsomes, rat liver, *Sachs*, 650
Pyrrolidine: Ring, nicotine, glutamate, precursor, *Lamberts and Byerrum*, 939
Pyruvate: Acetylenedicarboxylic acid, conversion; acetylenic compounds, utilization, *Yamada and Jakoby*, 706
Metabolism, heart sarcosomes, α-(+)-lipoic acid, *Reiss*, 789
—, insulin, effects, and glucose, acetate; rat adipose tissue, *in vitro*, studies, *Winegrad and Renold*, 267
—, tricarboxylic acid cycle, *Freedman and Graff*, 292

R

Rhamnose: L-, biosynthesis, studies, *Hauser and Karnovsky*, 287
Rhodospirillum rubrum: Chromatophores, illumination, reduced diphosphopyridine nucleotide oxidase, *White and Vernon*, 217
Ribitol: Dehydrogenase; enzyme purification and properties, *Fromm*, 1049
Ribonuclease: Inhibition; anionic polymers, *Hummel, Flores, and Nelson*, 717
Ribonucleic acid: Bacterial, stability, *Horowitz, Lombard, and Chargaff*, 1517
Carbon skeleton, adenosine incorporation, purine nucleosides, and deoxyribonucleic acid, *Neurospora*, *McNutt*, 193
—, cytidine, incorporation, pyrimidine nucleosides, and deoxyribonucleic acid, *Neurospora*, *McNutt*, 189
End groups, mammalian system, precursor, nucleoside triphosphates, *Hecht, Zamecnik, Stephenson, and Scott*, 954
Formation, dynamics, *Shigeura and Chargaff*, 197
Liver, rat, heterogeneous labeling; nucleotide metabolism, *Schneider and Potter*, 154
Ribonucleoprotein: Particle, role, protein synthesis, and growth hormone, effects, *Balis, Samarth, Hamilton, and Petermann*, 1152
Ribose: 2-deoxy-D-; pentose fermentation, *Lactobacillus plantarum*, *Domagk and Horecker*, 283
Ribose—*continued:*
Metabolism; biosynthesis from hexose, C-6 oxidation pathway, *Hiatt and Lareau*, 1023
Rubber: Enzymatic synthesis, mevalonic acid, *Park and Bonner*, 340

S

Saccharomyces fragilis: Transgalactosylase, cosubstrate specificity, *Pazur, Marsh, and Tipton*, 277
Salt(s): Neutral solutions, rate-regulating factors, collagen, heat precipitation, *Gross and Kirk*, 355
Sarcosine: Oxidase, cofactor requirements, *Dac and Wriston*, 222
Sarcosome(s): Heart, pyruvate metabolism, α-(+)-lipoic acid, *Reiss*, 789
Selenate: Enzymatic reactions, and sulfate, sulfite, molybdate, *Wilson and Bandurski*, 975
Selenite: Catalytic oxidation, glutathione, other sulfhydryl compounds, *Tsen and Tappel*, 1230
Selenium: Compounds, factor 3 activity, *Schwarz and Foltz*, 245
Serine: Indicator, triose phosphate isomerase reaction, pentose cycle, C^{14} in, and lactose, glycerol; lactose synthesis, *Wood, Gillespie, Joffe Hansen, and Hardenbrook*, 1271
Quantitative estimation, and ethanolamine, phospholipides, *Dittmer, Feminella, and Hanahan*, 862
Serum: Albumin, interaction, β^4-3-ketosteroids, Δ-lactoglobulin, functional groups; steroid-protein, interaction, *Westphal and Ashley*, 57
—, requirement, oxidative phosphorylation, flight muscle mitochondria, *Sacktor, O'Neill, and Cochran* 1233
Lipoproteins, and lymph, composition and concentration, fat and cholesterol absorption, *Hillyard, Chaikoff, Entenman, and Reinhardt*, 838
Silicic acid: Chromatography, complex lipide mixtures, separation, *Hirsch and Ahrens*, 311
Soybean: Hemagglutinin, composition, end groups, *Wada, Pallansch, and Liener*, 395
—, inactivation studies, *Liener*, 401
Spectra: Ultraviolet difference, tyrosine groups, proteins, amino acids, *Wetlaufer, Edsall, and Hollingworth*, 1421
Spectrophotometry: Determination, reduced glutathione, method, *Avi-Dor and Lipkin*, 69
Spermidine: Biosynthesis, and spermine, putrescine, methionine, *Tabor, Rosenthal, and Tabor*, 907
Spermine: Biosynthesis, and spermidine, putrescine, methionine, *Tabor, Rosenthal, and Tabor*, 907
Sphingolipide(s): Biochemistry; phytoglycolipides, structure, *Carter, Gigg, Law, Nakayama, and Weber*, 1309
Sphingomyelin: Enzymatic synthesis, *Sribney and Kennedy*, 1315
Sphingosine: Synthesis, enzymatic, *Brady and Koval*, 26
—, —, mechanism, *Brady, Formica, and Koval*, 1072
Squalene: Turnover, cholesterol biosynthesis, relation, *Loud and Bucher*, 37
Steroid(s): 68, and bile acids, transformation, enterohepatic circulation, cholic acid, *Arne and Sjövall* 872
Effects, and metabolic inhibitors, glycine-2-C^{14} incorporation, total proteins, nucleic acids, lymphocytes *in vitro*, *Blecher and White*, 1161
3α-hydroxy-, coenzymes, hydrogen transfer, di- and triphosphopyridine nucleotides, *Hurlock and Talalay* 886
Interactions, proteins; β^4-3-ketosteroids, serum albumin, Δ-lactoglobulin, functional groups, *Westphal and Ashley*, 57
Sulfokinases, separation, *Nose and Lipmann*, 1348
Strandin: Study, three-phase countercurrent distribution, *Meltzer*, 1327
Streptokinase: Activation, kinetic study, and urokinase, trypsin; human plasminogen, *Alkjaersig, Fletcher, and Sherry*, 86
Substrate(s): Oxidation, reductive biosyntheses; deuterium, location, glycogen from DL-2-deuteriolactate, *Hoberman*, 1045
Succinate: Lipide components, reduced diphosphopyridine nucleotide oxidase system, *Joel, Karnovsky, Ball, and Cooper*, 1565
Sulfate(s): Reactions, enzymatic, and sulfite, selenate, and molybdate, *Wilson and Bandurski*, 975

Sulfate(s)—*continued:*
Ketosteroid, hydrogen, hydrolysis, solvolysis, *Burstein and Lieberman* 331
Nucleotides, enzymatic conjugation, phenols, *Brunngraber,* 472
Synthesis, active, enzymatic phases, *Robbins and Lipmann,* 681
Sulfhydryl: Compounds, catalytic oxidation, and glutathione, selenite, *Tsen and Tappel,* 1230
Enzyme, groups; L-glutamic acid dehydrogenase, *Hellerman, Schellenberg, and Reiss,* 1468
Sulfhydryl group(s): Titratable, hemoglobins, *Murayama,* 594
Sulfite: Enzymatic reactions, and sulfate, selenate, and molybdate, *Wilson and Bandurski,* 975
Oxidation, ultra sensitive assay; xanthine oxidase, *Fridovich and Handler,* 1578
Sulfokinase(s): Steroid, separation, *Nose and Lipmann,* 1348
Synthetase: Carbamyl phosphate, mechanism, action, *Metzenberg, Marshall, and Cohen,* 1560

T

Testosterone-4-C^{14}: Biosynthesis *in vitro* from, and acetate-1-C^{14}, estradiol-17β, follicle-stimulating hormone, effect, *Hollander and Hollander,* 1097
Tetrahydro-2-naphthol-8-C^{14}: Tetralin-*p*-quinol, protein-bound derivative, formation, rat liver microsomes, *Hecker and Mueller,* 991
Tetralin-*p*-quinol: Formation, and protein-bound derivative, tetrahydro-2-naphthol-8-C^{14}, rat liver microsomes, *Hecker and Mueller,* 991
Thienylalanine: β-2-, inhibition studies, and β-1-naphthylalanine, *p*-tolylalanine, peptides, *Dunn,* 411
Thromboplastic activity: Phospholipides, purification, identification, *Therriault, Nichols, and Jensen,* 1061
Thymidine: Incorporation, deoxyribonucleic acid, enzymes, rat tissues, *Bollum and Potter,* 478
Thymine: Biosynthesis, vitamin B_{12}, *Lactobacillus leichmannii, Dinning, Allen, Young, and Day,* 674
Compounds, synthesis pathways, lymphatic tissues, tumors, *Kit, Beck, Graham, and Gross,* 944
Fluorometric determination, deoxyribonucleic acid, derivatives, *Roberts and Friedkin,* 483
Thymus: Calf, histone, fractionation, *Luck, Rasmussen, Satake, and Tsvetikov,* 1407
Tissue(s): Animal, aldono- and uronolactases, *Winkelman and Lehninger,* 794
—, phosphatidic acid in, *Hokin and Hokin,* 800
Culture, arginine requirement; related compounds, relationship, *Morgan, Morton, and Pasieka,* 664
Kidney, glucose, utilization, 6-deoxy-6-fluoroglucose, *Serif and Wick,* 559
Mammalian, metabolism, mucopolysaccharides, L-iduronic acid origin *Rodén and Dorfman,* 1030
Plant, amino acid activation, *Clark,* 421
Rat adipose, *in vitro,* studies; insulin, effects, metabolism, glucose, pyruvate, acetate, *Winegrad and Renold,* 267
—, —, —; insulin, effects, metabolism, specifically labeled glucose, *Winegrad and Renold,* 273
Rat, enzymes, thymidine incorporation, deoxyribonucleic acid, *Bollum, and Potter,* 478
Vitamin E deficiency, effect, and erythrocyte glutathione, *Ryerson, McMillan, and Mortensen,* 117
Tobacco: Mosaic virus, iron content, and infectious nucleic acid, properties, *Loring, Al-Rawi, and Fujimoto,* 1415
Organic acids, metabolism; excised leaves, culture, potassium phosphate solutions, *Vickery and Levy,* 1304
Tocopherol: Deprived animals, liver extracts, ascorbic acid synthesis, Mn^{++} and Co^{++} requirements, *Caputto, McCay, and Carpenter,* 1025
Tolylalanine: *p*-, inhibition studies, and β-2-thienylalanine, β-1-naphthylalanine, *p*-tolylalanine, peptides, *Dunn,* 411
Transaminase(s): γ-Aminobutyric acid, α-ketoglutaric acid, beef brain, *Baxter and Roberts,* 1135
Tryptophan, vitamin B_6 deficiency, effect, and rat liver tyrosine, *Lin, Civen, and Knox,* 1183
Tyrosine-, -ketoglutarate, rat, specificity, adaptive response, *Lin and Knox,* 1186
Transamination: Amino acid, aromatic, assay, enol borate-tautomerase method, and keto acid oxidation, *Lin, Pitt, Civen, and Knox,* 668
Transgalactosylase: Cosubstrate specificity, *Saccharomyces fragilis, Pazur, Marsh, and Tipton,* 277
Tricarboxylic acid(s): Cycle, pyruvate, metabolism, *Freedman and Graff,* 292
Trihydroxycholanic acid(s): 3α, 6,7-, isomeric, structures; bile acids, *Hsia, Elliott, Matschiner, Doisy, Thayer, and Doisy,* 1337
Trinucleotide(s): Hydrolysis; deoxyribonuclease specificity, *Potter, Laurila, and Laskowski,* 915
Triose: Phosphate isomerase reaction, and pentose cycle, C^{14}, lactose, glycerol, serine, indicators; lactose synthesis, *Wood, Gillespie, Joffe, Hansen, and Hardenbrook,* 1271
Triphosphate(s): Nucleoside, precursors, ribonucleic acid end groups, mammalian system, *Hecht, Zamecnik, Stephenson, and Scott,* 954
Tripolyphosphate(s): Enzymatic cleavage, deoxyguanosine triphosphate, and deoxyguanosine, *Kornberg, Lehman, Bessman, Simms, and Kornberg,* 159
Trypsin: Activation, kinetic study, and urokinase, streptokinase; human plasminogen, activation, *Alkjaersig, Fletcher, and Sherry,* 86
Diisopropylphosphoryl-, amino acid sequence, diisopropylphosphoryl binding, *Dixon, Kauffman, and Neurath,* 1373
Serum, inhibitor, partial purification, *Moll, Sunden, and Brown,* 121
Trypsinogen: Disulfide bonds, cleavage, and α-chymotrypsinogen, *Pechère Dixon, Maybury, and Neurath,* 1364
Tryptophan: L-, specific binding, serum albumin, *McMenamy and Oncley,* 1436
Transaminases, vitamin B_6 deficiency, effect and rat liver tyrosine, *Lin, Civen, and Knox,* 1183
Tyrosinase: Mammalian, studies; chromatography, cellulose ion exchange agents, *Brown and Ward,* 7
Tyrosine: Activating enzyme, hog pancreas, purification, properties, *Schweet and Allen,* 1104
Derivatives, ionization constants, and scheme, *Martin, Edsall, Wetlaufer, and Hollingworth,* 1429
Groups, proteins, amino acids, ultraviolet difference spectra, *Wetlaufer, Edsall, and Hollingworth,* 1421

Tyrosine—*continued:*
Ionization, scheme, tyrosine derivatives, ionization constants, *Martin, Edsall, Wetlaufer, and Hollingworth,* 1429
Rat liver, vitamin B_6 deficiency, effect, and tryptophan transaminases, *Lin, Civen, and Knox* 1183
Tyrosine-α-ketoglutarate: Transaminase, rat, specificity, adaptive response, *Lin and Knox,* 1186

U

Ultraviolet: Difference spectra, tyrosine groups, proteins, amino acids, *Wetlaufer, Edsall, and Hollingworth,* 1421
Urea: Biosynthesis; argininosuccinic acid, reversible formation, *Petrack and Ratner,* 1494
Urine: Human, extracts, analysis, methods, estrone, estradiol, estriol, *Gallagher, Kraychy, Fishman, Brown, and Marrian,* 1093
—, 4-pyridoxic acid, determination, *Reedy, Reynolds, and Price,* 691
Urocanic acid: Enzymatic degradation, *Revel and Magasanik,* 9
Urokinase: Activation, kinetic study, and trypsin, streptokinase; human plasminogen, activation, *Alkjaersig, Fletcher, and Sherry,* 86
Uronolactase(s): Animal tissues, and aldonolactases, *Winkelman and Lehninger,* 794
Uroporphyrin: I, porphyrins, enzymatic synthesis, porphobilinogen, *Bogorad,* 501
II, porphyrins, enzymatic synthesis, porphobilinogen, *Bogorad,* 510
III, porphyrins, enzymatic synthesis, porphobilinogen, *Bogorad,* 516

V

Valine: Metabolism, *Escherichia coli,* and isoleucine; isoleucine biosynthesis, negative feedback mechanism, *Umbarger and Brown* 415
—, and isoleucine, *Escherichia coli;* acetolactate formation, *Umbarger and Brown,* 1156
Vasopressin: Purification, protein complex, and oxytocin, *Acher, Light, and du Vigneaud,* 116
Side chain, and oxytocin, ring, posterior pituitary hormones, arginine-vasotocin, synthetic analogue, *Katsoyannis and du Vigneaud,* 1352
Virus: Tobacco mosaic, iron content, and infectious nucleic acid, properties, *Loring, Al-Rawi, and Fujimoto,* 1415
Vitamin(s): A, ester and alcohol, proteins, rat liver, *Krishnamurthy, Mahadevan, and Ganguly,* 32
A_2, anhydro-, and rehydrovitamin A_2, *Balasundaram, Bamji, Cama, Sundaresan, and Varma,* 827
—, rehydro-, and anhydrovitamin A_2, *Balasundaram, Bamji, Cama, Sundaresan, and Varma,* 827
B_6, bacterial oxidation; isopyridoxal and 5-pyridoxic acid, *Rodwell, Volcani, Ikawa, and Snell,* 1548
—, bacterial oxidation; "260 compound," structure, *Ikawa, Rodwell, and Snell,* 1555
—, deficiency, effect, rat liver tyrosine, tryptophan transaminases, *Lin, Civen, and Knox,* 1183
—, —, —, aminoisobutyric acid uptake, *Riggs and Walker,* 132
Vitamin(s)—*continued:*
B_{12}, and protein biosynthesis; relation, amino acid activation, *Wagle, Mehta, and Johnson,* 619
—, thymine biosynthesis, *Lactobacillus leichmannii, Dinning, Allen, Young, and Day,* 674
E, deficiency, effect, tissue, erythrocyte glutathione, *Ryerson, McMillan, and Mortensen,* 1172
—, —, monkey; sodium formate C^{14}, metabolism, *Dinning and Day,* 240

X

Xanthine: Oxidase, action, adenine 1-*N*-oxide; purine *N*-oxides, *Brown, Stevens, and Smith,* 1513
—; iron, internal electron transport, *Fridovich and Handler,* 1581
—; sulfite oxidation, ultra sensitive assay, *Fridovich and Handler,* 1578
Xanthosine 5′-phosphate: Amination, purified pigeon liver enzyme; guanosine 5′-phosphate, biosynthesis, *Lagerqvist,* 143
Intermediate, guanosine 5′-phosphate, biosynthesis, *Lagerqvist,* 138
Xanthurenic acid: Dehydroxylation, 8-hydroxyquinaldic acid, *Takahashi and Price,* 150

Y

Yeast(s): Baker's *O*-phosphoserine phosphatase from, *Schramm,* 1169
Glycolysis, biotin in, *Strauss and Moat,* 765
Inducible β-glucosidase, purification and properties, *Duerksen and Halvorson,* 1113
